

**Listing of the Claims:**

This listing of claims reflects the current status of all claims in the application:

Claim 1 (previously presented): A negative pressure therapy device, comprising:

- a screen means for placement within a wound bed;
- a sealing means adhered over said screen means and wound bed;
- a vacuum source fluidically communicating with said screen means; and
- a fluid compositional sensing device interposed between said screen means and said vacuum source;

wherein the fluid compositional sensing device senses compositional characteristics of unfiltered wound fluid from the wound bed.

Claim 2 (previously presented): The negative pressure therapy device of claim 1 wherein said fluid compositional sensing device comprises a gas chromatograph.

Claim 3 (previously presented): The negative pressure therapy device of claim 2 wherein said gas chromatograph further comprises a photo diode operable in optical proximity to fluids being drawn from the wound site towards said vacuum source.

Claim 4 (previously presented): The negative pressure therapy device of claim 1 wherein said fluid compositional sensing device is comprised of a sensor array.

Claim 5 (previously presented): The negative pressure therapy device of claim 1 further comprising a collection canister interposed between said screen means and said fluid compositional sensing device.

Claim 6 (previously presented): A negative pressure therapy device, comprising:

- a screen means for placement within a wound bed;
- a sealing means adhered over said screen means and wound bed;

a vacuum source fluidically communicating with said screen means;  
a collection canister interposed between said screen means and said vacuum source; and  
a fluid compositional sensing device for detecting infection;  
wherein the fluid compositional sensing device senses compositional characteristics of unfiltered wound fluid from the wound bed, said compositional characteristics indicative of said infection within the wound.

Claim 7 (previously presented): The negative pressure therapy device of claim 6 wherein said fluid compositional sensing device is embedded within said screen means.

Claim 8 (previously presented): The negative pressure therapy device of claim 6 wherein said fluid compositional sensing device is disposed on said sealing means, such that said fluid compositional sensing device is in contact with said screen means.

Claim 9 (previously presented): The negative pressure therapy device of claim 6 wherein said fluid compositional sensing device is disposed within said canister.

Claim 10 (previously presented): The negative pressure therapy device of claim 6 further comprising a flexible conduit for communicating between said screen means and said vacuum source.
